Licensed Manufacturer of the Mobiloo

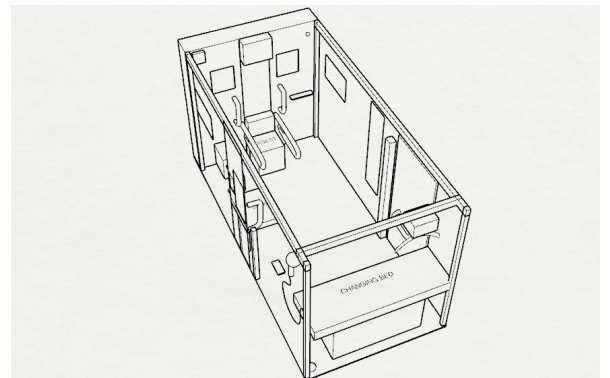

Company No: 10944213 VAT No: 283822092

A big congratulations to college leavers and parents from the team here at Accessible Vehicle Conversions CIC, we wish you all the best of luck on your next adventures.

Wherever you're headed next we would like to reassure you that restrictions imposed by a lack of adequate toilet facilities are gradually being lifted with the help of **our growing range of fully mobile accessible changing place facilities.**

From the largest of vans down to the smallest of trailers and everything in between we're here to support your next movements (# 🦿).

As the licensed manufacturers of the generation three Mobiloo vehicles we're well networked on the ground and see first hand how our facilities benefit the communities they serve.

Being a CIC we're **free from corporate shackles and the demands of hungry investors** allowing us to focus on delivering modern and innovative solutions to suit not just your needs but also your budget. As such all our units are built to order following an initial **no obligation consultation** in which **we listen carefully** to identify how we're best able to facilitate your ambitions.

We strive for a solution for every budget however as standard we use brand new base vehicles from leading manufacturers and the **latest industry recognised accessibility equipment.**

Due to be released this year our **MiniLoo solution for families and individuals is now available to preorder**. Fully customisable to your specific needs it includes all the essentials of a changing place facility but comes neatly packaged into a compact unit that can be towed by a normal family car (towbar required).

No longer will you and your family be reliant on venues/organisers/companies to cover your most basic needs!

For many, particularly families, the cost of a custom made brand new unit will be the main prohibitive factor and that's not ok with us, so we're exploring **ethical finance options** and also extending our expertise to assist with **custom low budget projects**, using secondhand and refurbished base vehicles and equipment to achieve **identical basic functionality but on a greatly reduced budget**. Although every care is taken during the conversion process naturally we are unable to offer the usual warranty that comes with new products but we do offer **servicing, repair and upgrade services** from our workshop in the south west or nationally via a mobile service if required.

Last build slots available for end of 2021, now booking slots through 2022 and 2023.

Listen, design, refine, build, test, refine, test, deliver, support.
