

Coronavirus Vaccine

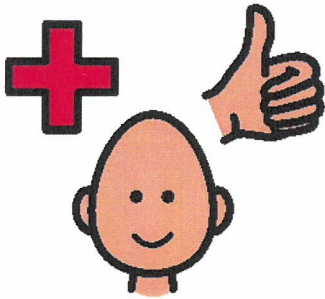

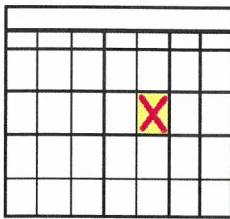

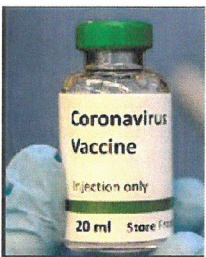

There is now a vaccine for Coronavirus.

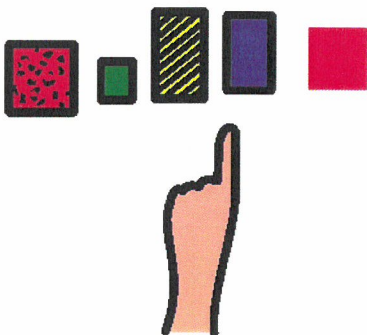

Vaccines protect you and other people from catching viruses and diseases. Things like flu.

Doctors and scientists think that if people have the vaccine, less people will get ill from Coronavirus.

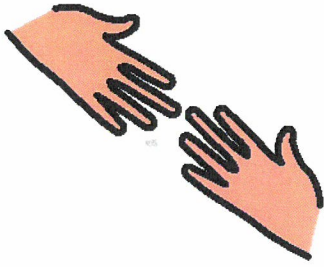

You have been offered this vaccine because you could be at risk of being ill from Coronavirus.

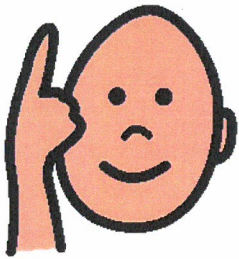

You can choose whether you have the vaccine.

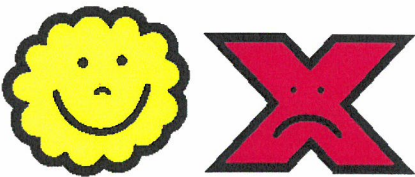

If you are not sure about having the vaccine, people can support you to get more information.

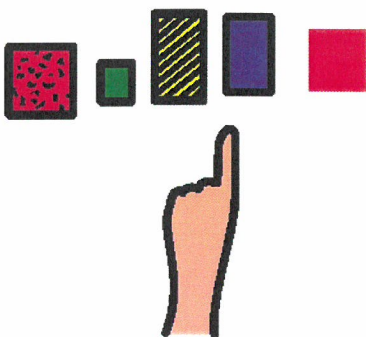

This could be people you trust, family, friends or staff that support you.

They can help you understand the things you need to think about, so you can decide if you want the vaccine.

You can say no if you do not want the vaccine.

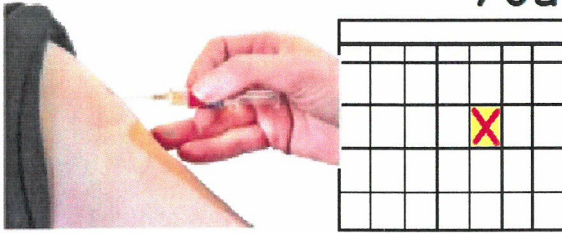

Having a vaccine is your choice.

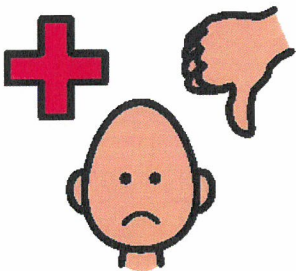

If you have the vaccine a doctor or nurse will give you the injection in your arm. This will be your first injection.

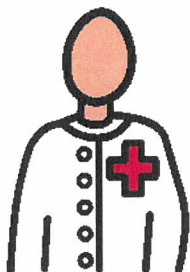

You will have a 2nd injection at a later date.

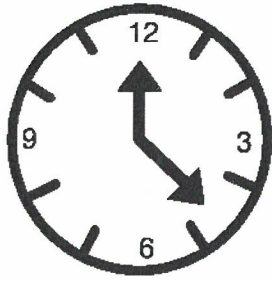

Your arm may get sore for a little while.

Some people might have sore muscles or a temperature after the injection. This is because the vaccine is new to your body.

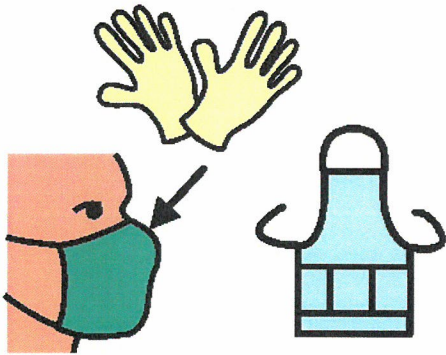

If you are worried you can talk to a nurse or doctor.

Vaccines take time to work

Keep on washing hands and staying a safe distance from other people

Staff will still wear PPE.
This is to keep everyone safe.
